PackPrint-111-001

Shipping Label Roll Feed Issue

Technician: Ridley Lherisse

Environment: Enterprise Operations

Device Type: Shipping Label Printer

Date: 09/17/20265

Location/Area: Boston

1. Issue Summary

A printer issue was reported where shipping labels were not feeding correctly during normal operations. The printer was producing inconsistent paper movement, causing labels to print improperly and interrupting workflow.

2. Symptoms Observed

Upon inspection:

- Shipping label paper roll was not feeding consistently
 - Printer lid assembly appeared loose
 - A securing component on the printer lid was no longer properly fastened
 - The loosened lid affected the paper roll positioning mechanism
-

3. Troubleshooting Performed

Step 1: Physical Inspection

I inspected the printer assembly and identified that the black lid component was loose due to a loosened fastening component.

The loose lid was preventing the internal paper roll guide mechanism from maintaining proper alignment.

Step 2: Temporary Stabilization

To restore printer functionality, I secured the loose lid area using available materials and ensured the yellow paper guide bar remained in the correct position to maintain proper label roll feeding.

4. Root Cause Analysis

Root Cause:

A loose printer lid component caused the paper roll guide mechanism to become unstable, resulting in inconsistent label feeding and printing interruptions.

5. Resolution

Fix Implemented:

- Identified the loose lid assembly as the source of the issue
- Stabilized the lid component using a temporary securing method
- Positioned the yellow paper guide bar correctly to maintain consistent label movement

- Tested printer functionality after adjustment
-

6. Validation Testing

- ✓ Printer powered on successfully
 - ✓ Shipping label roll fed correctly
 - ✓ Labels printed normally
 - ✓ Workflow was restored
-

7. Follow-Up Recommendation

The temporary stabilization restored functionality; however, the printer should receive a permanent repair or replacement hardware component to ensure long-term reliability.

Skills Demonstrated

- Hardware troubleshooting
- Printer support
- Mechanical diagnosis
- Root cause analysis
- Operational support
- Temporary remediation
- Technical documentation
