

Workstation Pick-113-001 Report

Frozen Monitor Display — Pick/Pack Monitor Workstation

Technician: Ridley Lherisse

Environment: Enterprise Operations

System Supported: Pick Monitor Workstation

Date: 09/24/2026

Location/Area: Boston

1. Issue Summary

A call was received regarding a workstation monitor that became unresponsive during operations. The display was frozen, preventing the user from interacting with the system.

The user reported that the screen was not responding to inputs, affecting normal workflow.

2. Symptoms Observed

Upon arrival, I observed the following:

- Monitor display was frozen
 - Mouse cursor was still movable
 - Screen elements were not responding to clicks or input
 - Normal workstation interaction was unavailable
-

3. Troubleshooting Performed

Step 1: Verified Monitor Power

I attempted to power cycle the monitor using the physical power button to restore functionality.

Result:

- Monitor restarted, but the issue remained
 - Display continued to be frozen and unresponsive
-

Step 2: Performed Workstation Power Reset

I disconnected the workstation's AC power cable to completely remove power from the system.

After reconnecting the power cable, I restarted the workstation.

Result:

- Workstation successfully rebooted
 - Monitor returned to normal operation
 - User interaction was restored
-

4. Root Cause Analysis

Root Cause:

The workstation experienced a system-level freeze that caused the display interface and user input functions to become unresponsive while the mouse cursor remained active.

The exact cause of the freeze could not be confirmed, but a complete power reset successfully restored normal workstation functionality.

5. Resolution

Fix Implemented:

- Performed a full workstation power cycle
 - Verified successful reboot
 - Confirmed monitor responsiveness
 - Confirmed normal workstation operation
-

6. Validation Testing

After the fix:

- ✓ Workstation powered on successfully
- ✓ Monitor displayed correctly
- ✓ Mouse and user inputs were restored
- ✓ System returned to normal operation
- ✓ User workflow was able to continue

FINAL RESULT: Trouble shoot completed. Back to normal

7. Lessons Learned

A frozen workstation may not always indicate a monitor hardware failure. Performing basic troubleshooting steps, including verifying display behavior and completing a controlled power reset, can quickly restore functionality and reduce downtime.
